1	ORDINANCE	
2	DETERRING THE DISTRIBUTION AND SALE OF THC-LIKE SYNTHETIC	
3	SUBSTANCES, COMMONLY CALLED SPICE, AND SUBSTITUTED	
4	CATHINONES, COMMONLY CALLED BATH SALTS.	
5	BE IT ORDAINED BY THE COUNCIL, THE GOVERNING BODY OF THE CITY OF	
6	ALBUQUERQUE:	
7	SECTION 1. The "Synthetic Intoxicant Ordinance" is hereby adopted to	
8	read as follows:	
9	"Section 1. SHORT TITLE. This Ordinance shall be known and may be	
10	cited as the 'Synthetic Intoxicant Ordinance.'	
11	Section 2. PURPOSE AND INTENT.	
12	(A) A product commonly referred to as "spice" is sold by local	
13	businesses. Spice typically appears as a packaged dried plant product or	
14	leaves, and is sold at gas stations, liquor stores, convenience stores, smoke	
15	shops and other outlets. While Spice sometimes has a label warning against	
16	human consumption, that is its intended use. Businesses that sell Spice	
17	openly solicit the product by claiming that, when smoked, Spice causes a	
18	marijuana-like high. Spice is a green leafy product sprayed with synthetic	
19	substances that mimic the effects of marijuana when smoked. Spice is	
20	marketed under numerous brand names, including Spice, Spice Silver, Spice	
21	Gold, Spice Diamond, Spice Tropical Synergy, Spice Arctic Synergy, Spice	
22	Gold Spirit, PEP Spice, PEPpourri, K2, Genie, Yucatan Fire, Dream, Ex-ses,	
23	Blaze, Spike 99, Spark, Fusion, Magma, Hard Core, and Deliverance, as well as	
24	other names.	
25	(R) The use of substituted cathingnes, commonly called "bath salts"	

has significantly increased throughout the United States and the United States

- 1 Drug Enforcement Administration (DEA) used its emergency scheduling
- 2 authority to temporarily control Mephedrone, Methylenedioxypyrovalerone
- 3 (MDPV), Methylone, and other chemical compounds found in "bath salts"
- 4 finding that ingestion of these substances can cause serious injury and death.
- The City Council also finds that death and serious injury can be caused by 5
- 6 bath salts.

- (C) Spice and bath salts are synthetic intoxicants that endanger the public. While distribution of these products is a violation of State law, the available penalties do not appear to adequately deter vendors because the profitability from the sale of these products may outweigh the risks associated with prosecution. Manufacturers and vendors of synthetic intoxicants change the names, labeling, or chemical composition of the products to avoid prosecution. Consumers, including minors, quickly learn the name of the new mock substance by word of mouth or on the internet. Businesses that distribute synthetic intoxicants create a public nuisance in the City as defined by State law and City ordinances.
- **Emergency room physicians report that users of these products** experience serious side effects, including convulsions, anxiety, dangerously elevated heart rates, increased blood pressure, vomiting, and disorientation. According to February 8, 2012 data from the American Association of Poison Control Centers, in one year there has been a greater than two-fold increase in the number of calls about exposure to synthetic intoxicants.
- (E) Field testing technology is inadequate in many cases and the products being sold to the public have to be seized from the vendor and lab tested. Lab testing is costly and time consuming. If a particular brand name product is determined to be an illegal substance, that substance will often be repackaged or relabeled by the time the police return to the business. This subterfuge wastes police resources and further endangers the public.
- (F) Synthetic Intoxicants tend to avoid drug testing methods used to determine whether a person has consumed a controlled substance. Some of the most dangerous consumers, those prohibited from consumption of illicit drugs or alcohol by court orders or terms of probation, gravitate toward these products because they are difficult to detect or undetectable.
